Tools for Identifying Climate Vulnerable Communities

- CDPH: Climate Change and Health Vulnerability Indicators for California (CHVI)
- Public Health Alliance of Southern California (PHASC): Health Disadvantage Index (HDI)

A Public Health Framework

Source: Bay Area Regional Health Inequities Initiative (BARHII) Conceptual Framework, 2006.

Climate & Health Vulnerability

Climate Change and Health Vulnerability Indicators for California

ENVIRONMENTAL EXPOSURES

Magnitude, frequency, and duration of environmental or climate-related factors that directly affect human health

POPULATION SENSITIVITY

Physiological and socio-economic factors which directly or indirectly affect the degree to which a population is impacted by climate change

ADAPTIVE CAPACITY

Responses and adjustments to the impacts of climate change, including the capacity to moderate damages, take advantage of opportunities, and cope with consequences.

Climate Change and Health Vulnerability Indicators for California

Environmental Exposures:

Heat

Air Quality

Drought

Wildfires

Sea Level Rise

Adaptive Capacity:

Air Conditioning Ownership

Tree Canopy

Impervious Surfaces

Public Transit Access

Population Sensitivity:

Children and Elderly

Poverty

Education

Race and Ethnicity

Outdoor Workers

Vehicle Ownership

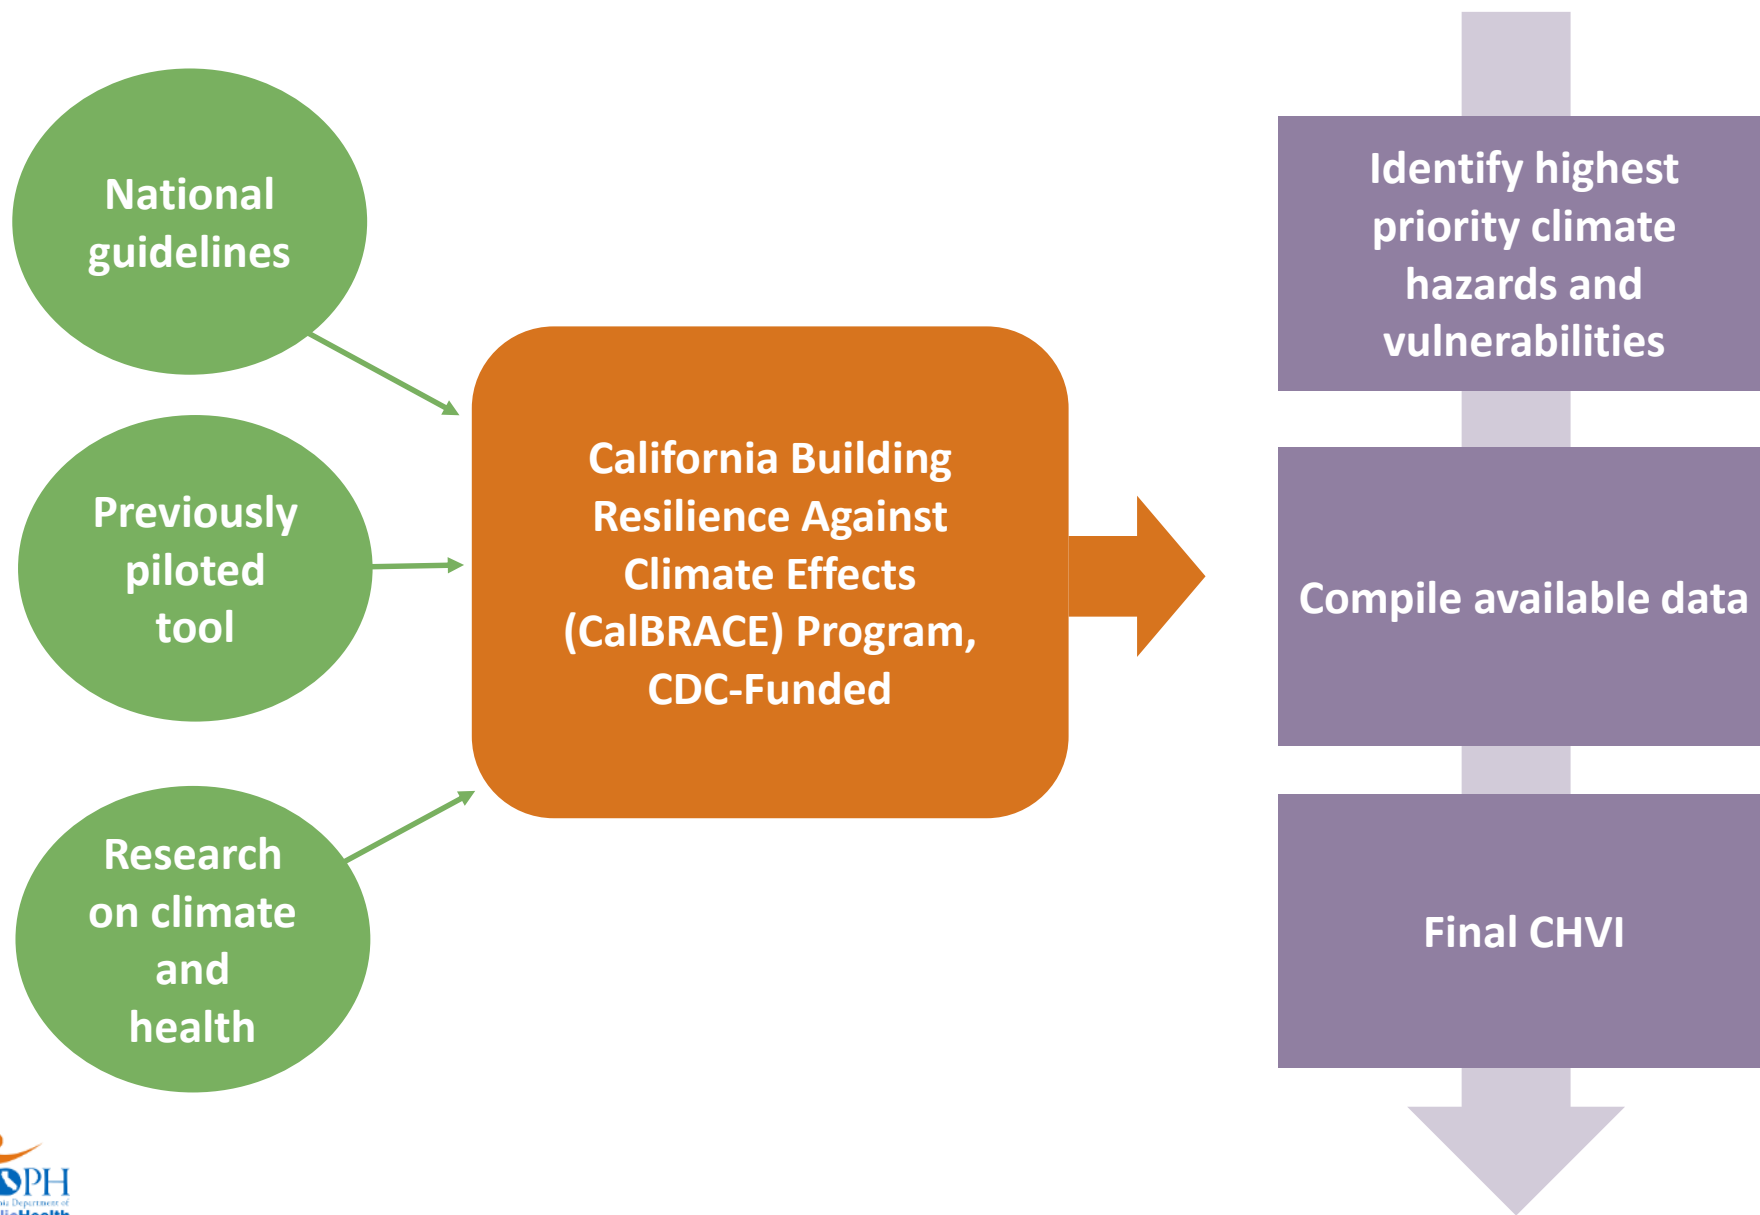

Linguistic Isolation

Disability

Health Insurance

Violent Crime Rate

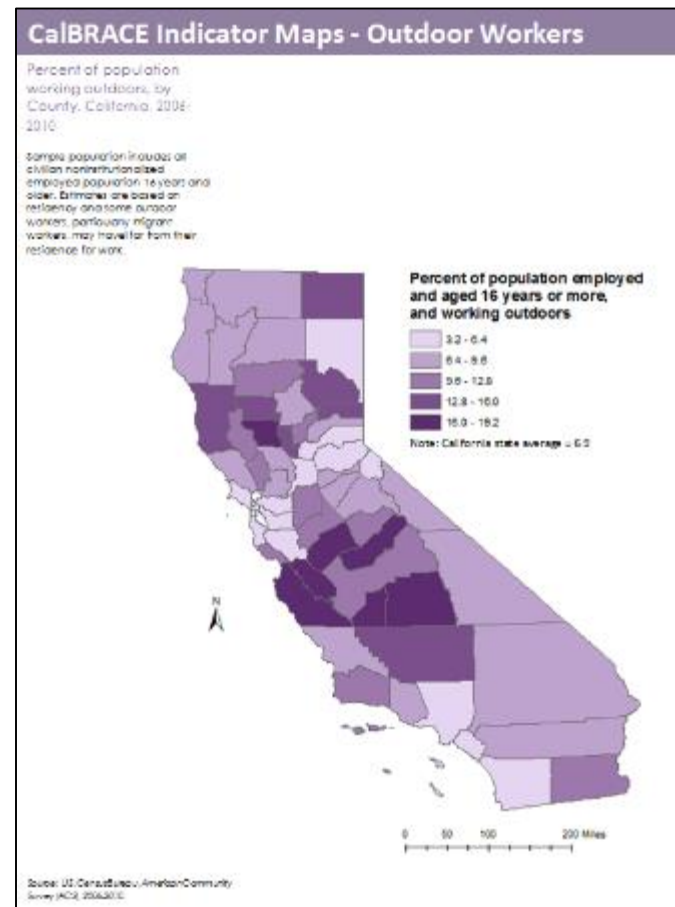

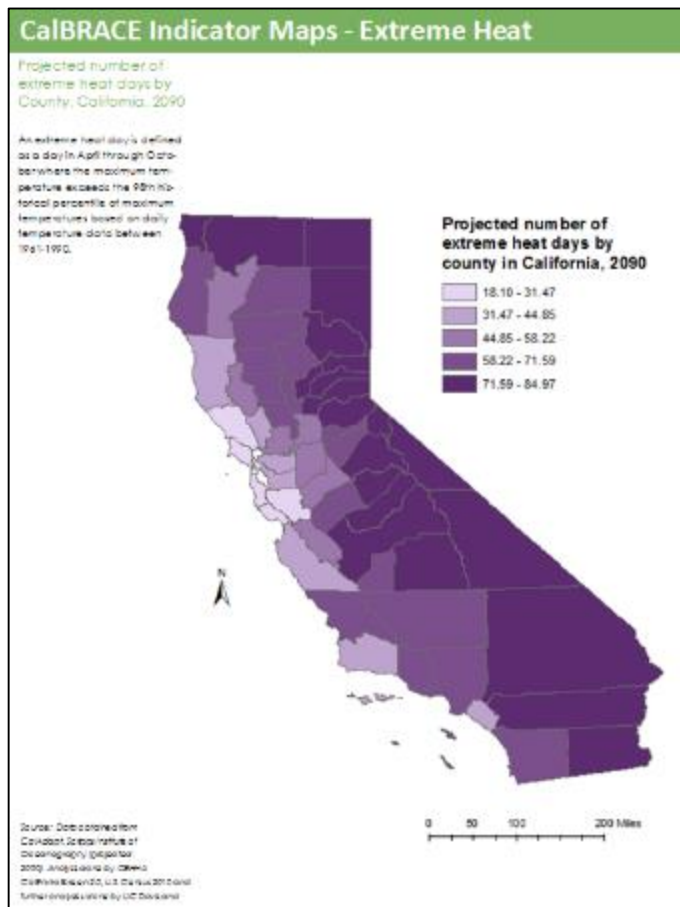

Development of the Climate Change and Health Vulnerability Indicators for California

Climate Change and Health Vulnerability Indicators

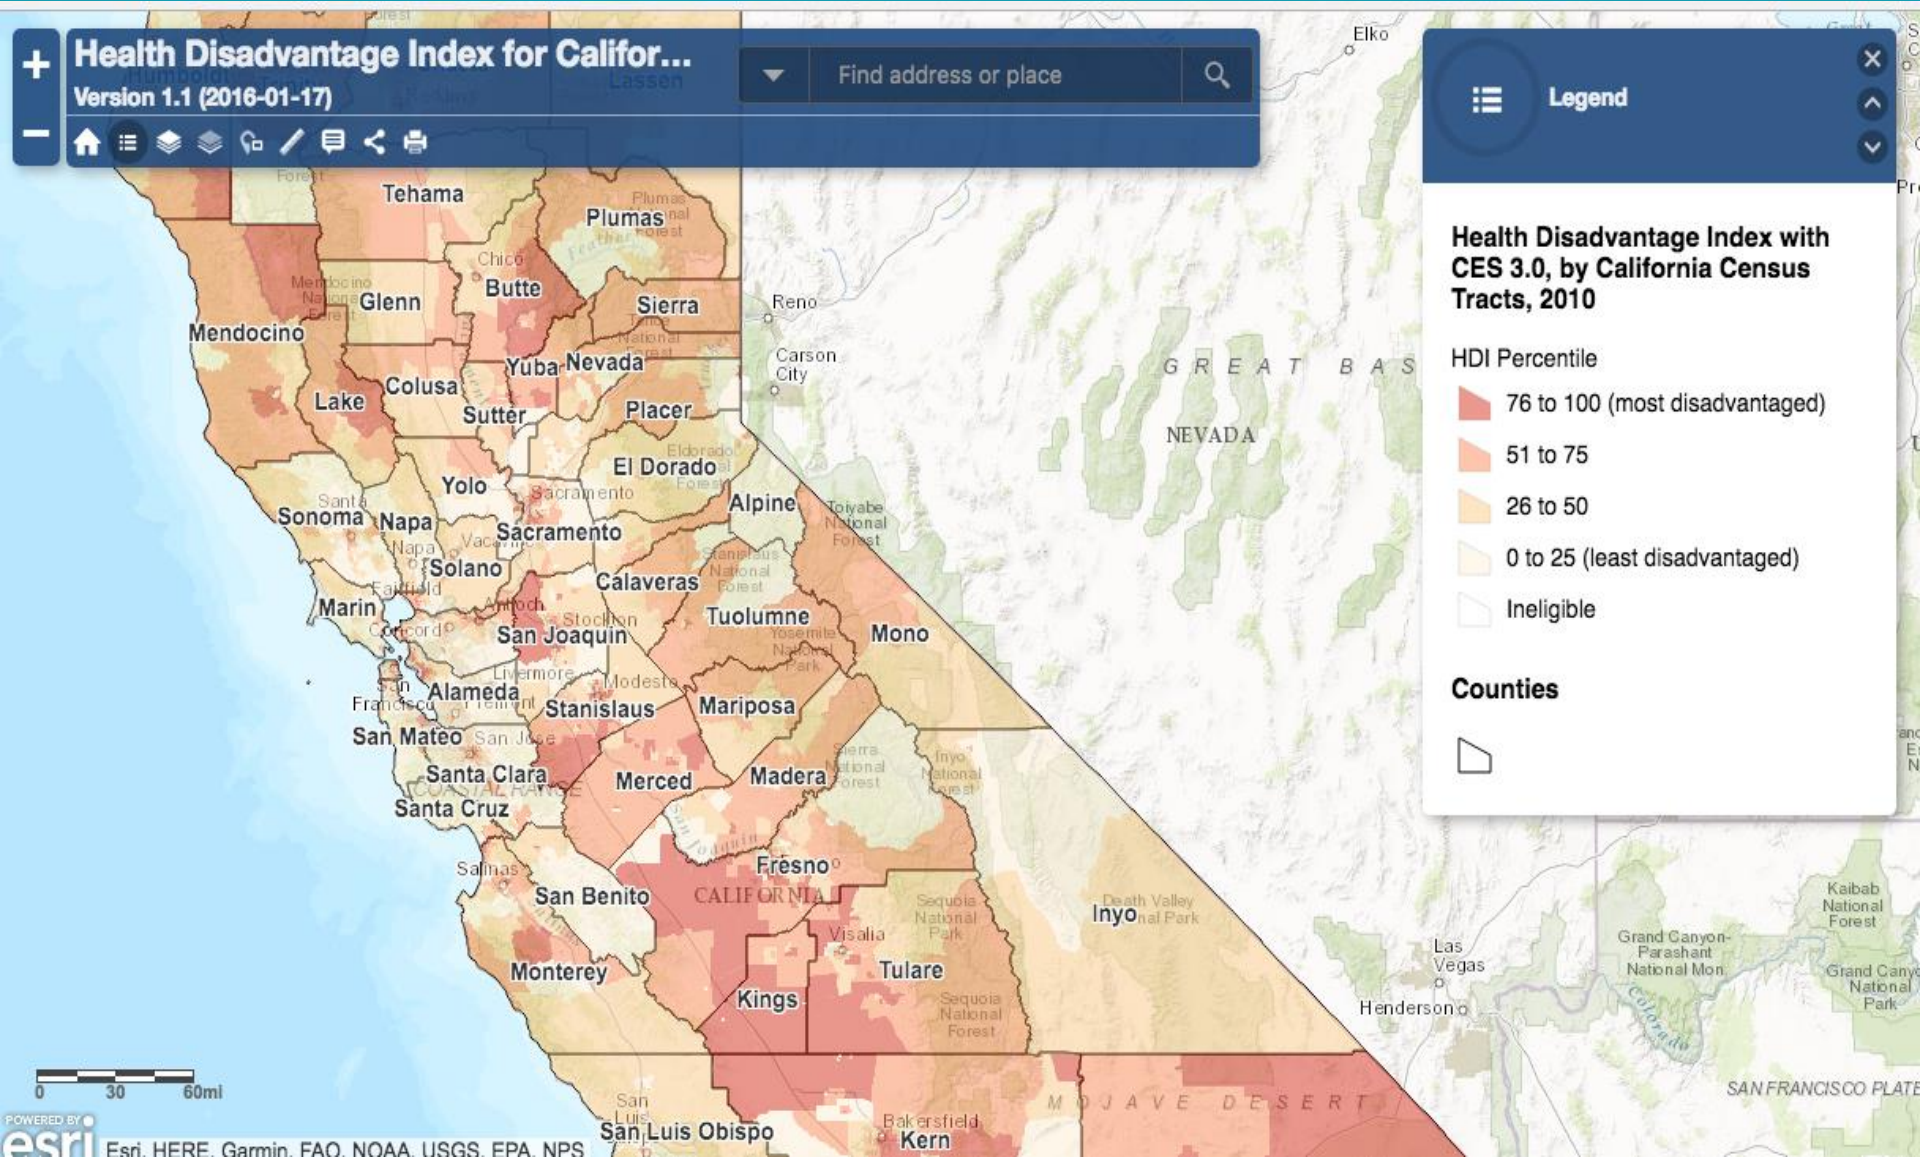

- 3 Domains, 19 indicators
- Geographic Levels: State, Climate Region, County, Census Tract (for most indicators)
- Data can be ranked (e.g., highest to lowest, decile, ratio compared to state average)
- Some indicators can be stratified by race/ethnicity
- Public data sources
- Accompanying narratives explain data sources, how to use the data, and their relevance to climate and health

Climate Change and Health Vulnerability Indicators

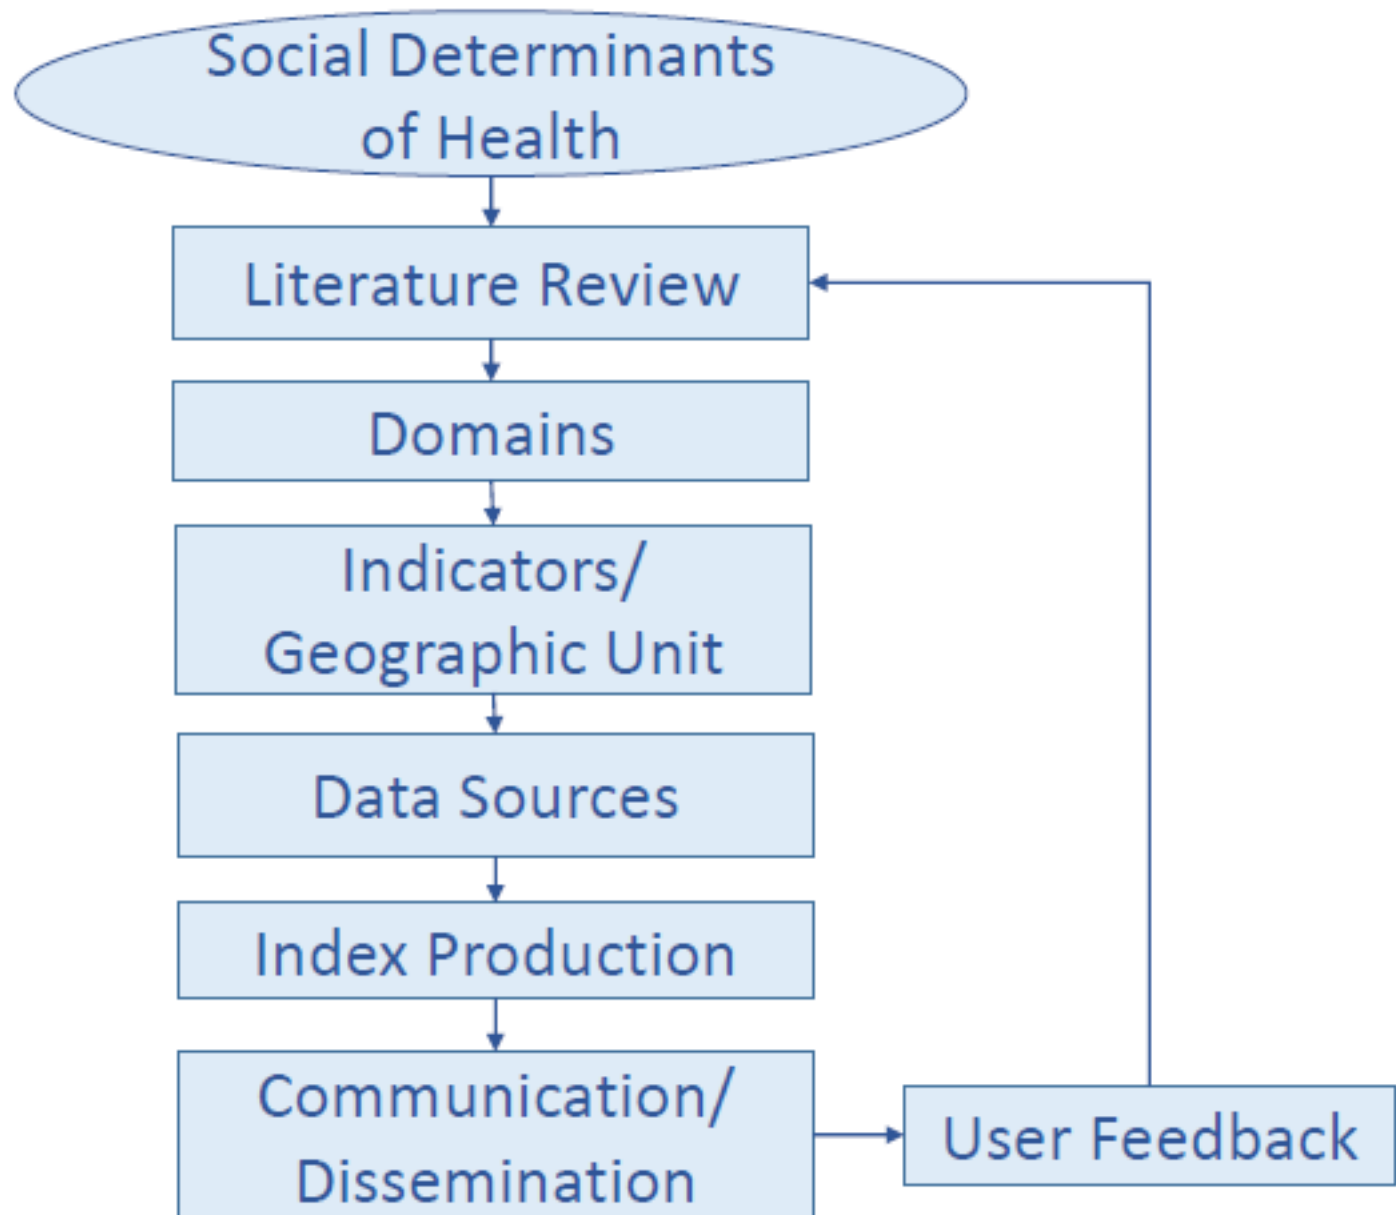

Health Disadvantage Index

Development of the Health Disadvantage Index

Current HDI Domains and Indicators

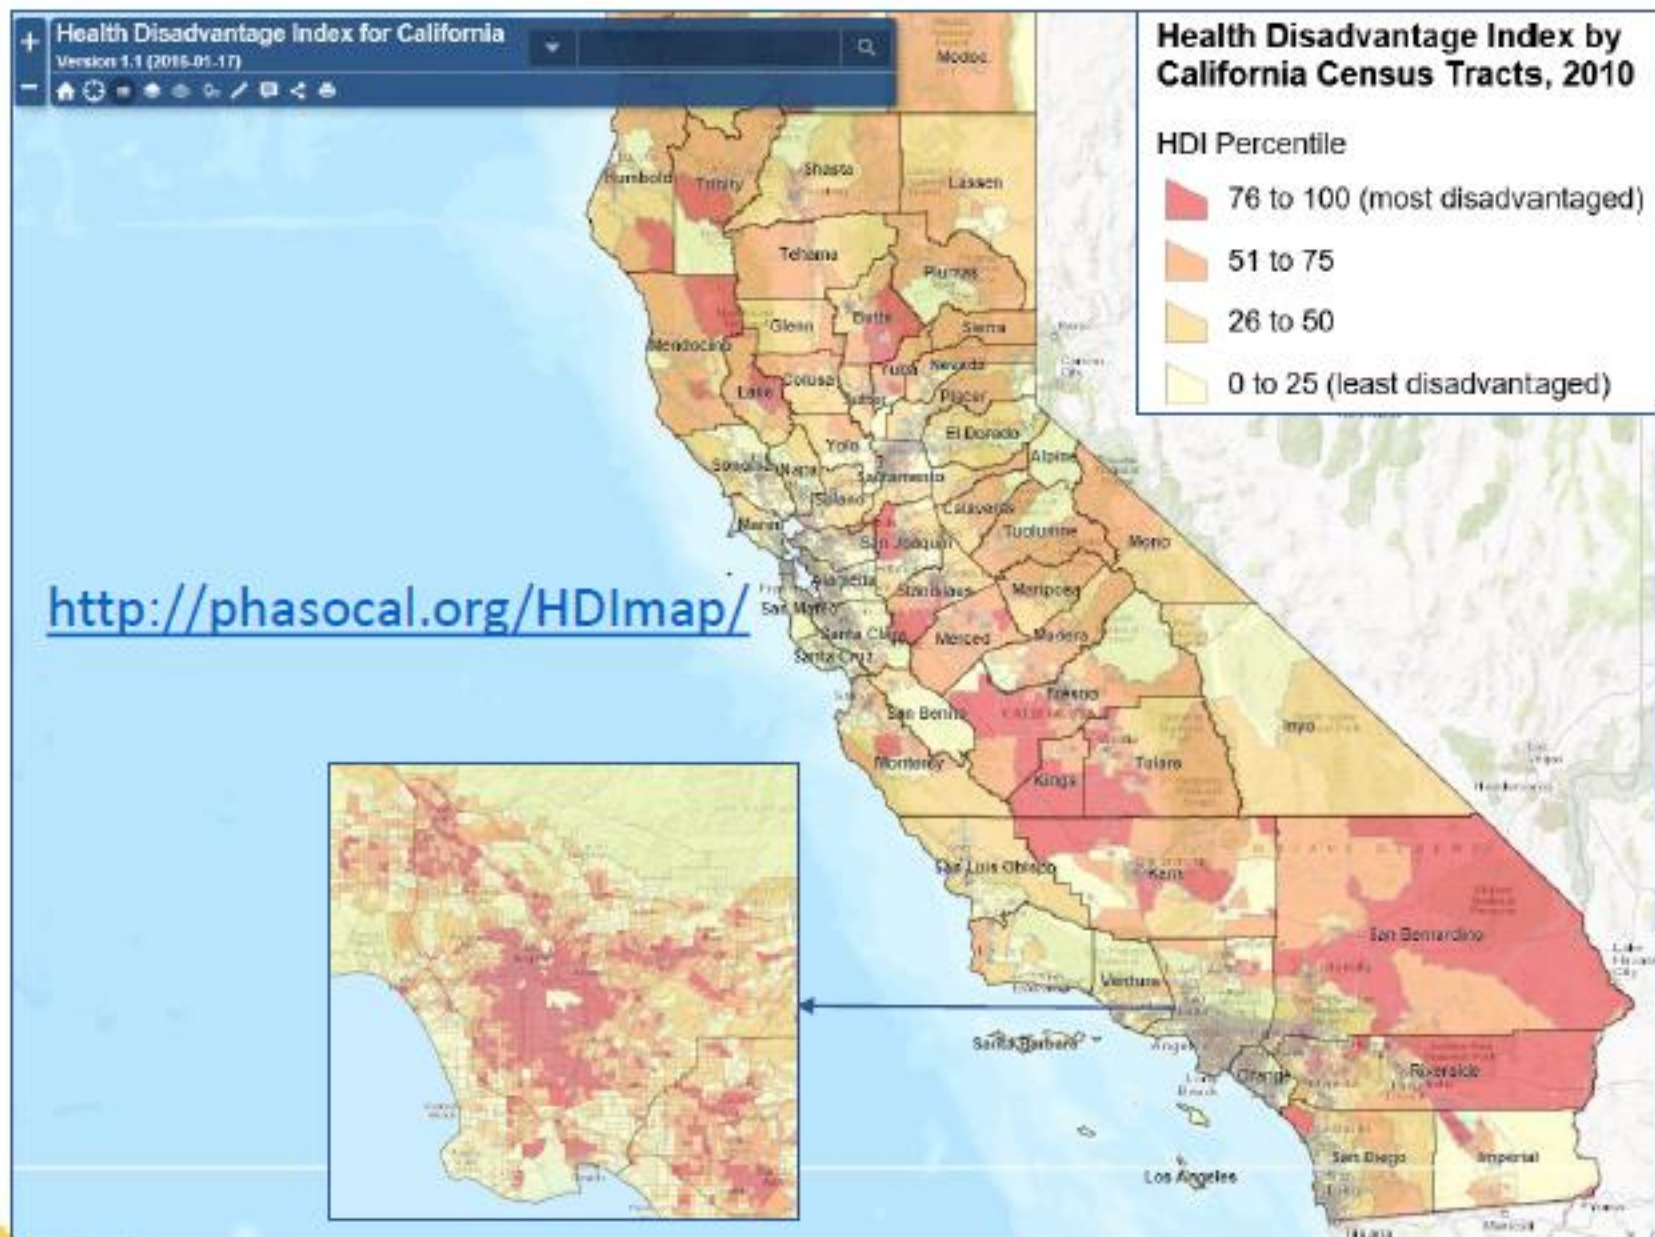

<u>Economic Resources</u>	<u>Social Resources</u>	<u>Educational Opportunity</u>	<u>Health Outcomes</u>	<u>Environmental Hazards</u>	<u>Complete Neighborhoods</u>
50	15	10	10	10	5
Poverty Crowding Housing Cost Unemployment Rate No Auto Access Median Income Uninsured No Kitchen	High school educational attainment Linguistic Isolation Renter Occupied Voting Single Parent Households	Residents whose age makes them eligible for, but not enrolled in Preschool High School	Population disabled Low Birth Weight Life Expectancy Asthma ER Visits	Pedestrian Injuries PM 2.5 Concentration Traffic Density	Supermarket Access Park Access Retail Density Tree Canopy

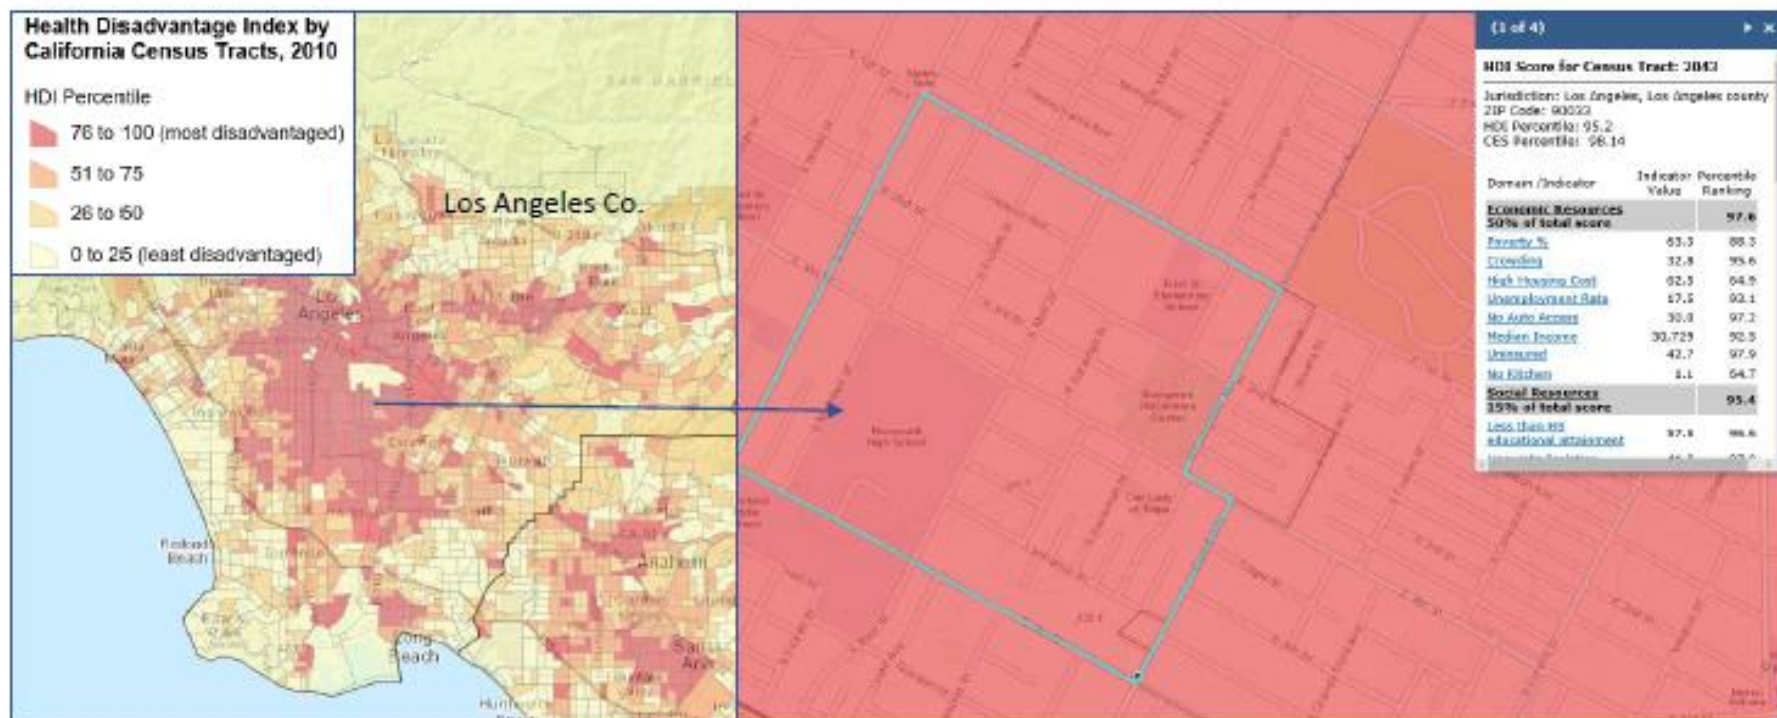

Current HDI Methodology

- 6 domains, 27 indicators
- Public data sources
- Geographic unit: Census Tract
- Standardize and scale each indicator: Z score between 0 (least) and 5 (most disadvantaged)
- Compute domain arithmetic means
- Total score = weighted average of domain means with weights informed by literature
- Provide raw score and percentile among 7,793 eligible Census Tracts

Online Map and Drill Down

Online Map and Drill Down

<http://phasocal.org/HDImap/>

How Does HDI Compare to CES?

- HDI vs. CES most disadvantaged

HDI1.1 Top 25%	CES 2.0		CES 3.0	
	Yes	No	Yes	No
Yes	1319 (6.0)	630 (2.8)	1376 (6.0)	573 (2.6)
No	637 (3.3)	5207	572 (2.9)	5267

Millions in parentheses (population)

Life Expectancy at Birth (years) in Most and Least Disadvantaged HDI and CES Census Tracts, 2010

HDI	CES2.0	
	Top 25%	Bottom 75%
Most Disadvantaged: Top 25%	79.1	78.4
Least Disadvantaged: Bottom 75%	80.2	81.6

Update to HDI 2.0: Healthy Places Index

- Update data with ACS 2010-2014
- Improve domain weighting and predictive power
- Validate score against health outcomes
- Improved map functionality
- Climate change indicators added as layers (decision support layers)
- Accompanying policy guides
